

ADVENTURES AROUND THE WORLD

Scuba Diving – Maldives

Scuba Diving around the Maldives has recently become hugely popular among the diving community. The hundreds of isolated and deserted Islands offer an enormous playground for divers to explore incredible marine life. You are likely to be able to spot Eagle Rays, Napoleon Wrasses, lots of pelagic fishes such as the Giant Trevally or the Barracuda, the magnificent **Manta Rays** and the very rare **Whale Shark**! You will also encounter the Whitetip and the Grey Reef Shark, and if you are very lucky the rare Hammerhead Shark! The best location for big pelagic fishes is called the Ari Atoll and most of the live boards visit it. Inside the lagoon, the shallow water has a teeming fish life with myriads of reef fishes and bright, colourful coral gardens.

Skydiving : Queenstown, New Zealand

You can skydive anywhere on earth, but why not do it at the adventure capital of the world. Abel Tasman offers better weather than Queenstown, so the chances of actually getting to jump are better here. You also get to jump from an altitude of 16,000 feet. That's three thousand feet more than most commercial jumps giving you extra freefall time. It's so high, you'll need oxygen during your flight up!

Ice Climbing: Canmore Alberta, Canada

Ice Climbing is a crazy adventure where you not only have to worry about being sure footed, you also have to worry about ice breaking off and either falling on your partner or taking you down with it. Luckily at Canmore Alberta, guides with decades of ice climbing experience lead the way and make sure adventurers are on the firm ice of a frozen waterfall. There is nothing more rewarding than getting to the top of the climb and taking in the magnificent view.

Microlight Flight : Durban , South Africa

Take a microlight flight and feel the wind whip through your hair as you fly high in the sky to take in the view. At off the coast of Durban South Africa, you can take in and witnessed sea lions playing.
